Not only is this the oldest playground in Central Park, created in 1927, and the largest at 1.8 acres, but it also now features the first synthetic grass install in Central Park.
“I researched several synthetic grass companies and chose SYNLawn New York because of their reputation in the city and the many green features of their product. I particularly liked the aspect of the Yellowstone Green Initiative where they use the recycled plastic obtained from water bottles in Yellowstone National Park and use it in their cushion backing. It seemed to close the recycling loop, and it is a nice feature to talk about with our board of trustees.” - David Turner
